Math 250B  Homework formatting policy

• Put the assignment number and your name at the top of the first page
• Staple all pages in the upper left corner
• All HW must be neatly presented. You may have to copy it cleanly from your scratch work after you are done solving the problems
• Present the problems in the order in which they were assigned
• Start each problem on a new line with the chapter and problem number (ex 5.43)
• Solve each problem in a linear fashion, i.e. do not back up on the page
• Box in your final answer at the bottom of each problem
• Do not round intermediate values, instead store and retrieve them in your calculator. Better yet solve your equations symbolically.
• Round your final answer to four significant digits unless otherwise indicated
• Make sure your final answer makes sense, i.e. can it be negative? Should it be this large?
• Credit will only be given for problems with all work shown.
• I will grade HW on completeness and correctness (i.e. did you do all problems, and were they correct). I will usually pick one or two problems in a HW assignment to grade for execution of the work shown. Be neat or you will not receive credit.
